

TuneMatic

Automatic Motorized Antenna Controller

ELECRAFT KXPA-PX3 CONNECTIONS

Rev. 9/25/21

The Elecraft E1 interface-amp option allows the Elecraft transmit keyline from the rig to the Elecraft amp to open through the TuneMatic AMP option model. The keyline is routed in series with the TuneMatic relay, so that the keyline becomes disabled when TuneMatic tunes and stores.

- Connect KXPA RF connections. If using the 100w version, connect TuneMatic to output of amp. If using an amp greater than 200w, connect TuneMatic to INPUT side of amp.
- Connect KXPA adapter as shown.
- Connect PX3 adapter as shown. If NOT using the PX3, connect the 3.5mm plug from KXPA adapter to ACC1 of rig.
- Connect TuneMatic interface as instructed in Elecraft E1 interface supplement.
